## Developmental prerequisites of attachment

In middle childhood

## **Attachment developmental prerequisites**

- Cultural & Ecological - — — — — — — -

factors

#### **Sensitive parenting**

(e.g., Ainswirth et al., 1978/2015)

- Sensitivity (vs Insensitivity)
- Availability (vs Ignorance and Neglect)
- Acceptance (vs Rejection)
- Cooperation (vs Interference)

Expression of positive > negative feelings

**Child attachment security** 

## **Culture-fit hypothesis**

(Deater-Deckard & Dodge, 1997; Friedman et al., 2010; Ward & Chang, 1997)

X is not accepted/normative in culture Y

misfit

Negative developmental outcomes in children

Corporal punishment in European-American sample

Negative

PB

Corporal **punishment** 

Parental

behavior X

(Deater-Deckard & Dodge, 1997);

Attachment avoidance

(Friedman et al., 2010)

**Expression of negative** 

feelings?

fit

X **is** accepted/normative in culture Z

No effect

(Culture as a buffer of negative outcomes)

Corporal punishment in African-American sample

Positive

PB Expression of acceptance (Lubiewska et al., 2015);

**Expression of positive** 

feelings?

Positive outcomes?

## Aim of the study

To verify culture-fit hypothesis by testing relations between maternal expression of (+) positive and (-) negative feelings and child attachment in cultural context

Hofstede (2009): Individualism/Collectivism,

**Restraint/Indulgence** 

Gelfand (2011): **Tightness/Looseness** of culture

Polish cultural context: Social change from Restraint to Indulgence in child rearing, tight, individualistic

Turkish cultural context: Indulgent, tight, collectivistic

**Dutch** cultural context: Indulgent, loose, individualistic

#### **Hypotheses**

POSITIVE feelings

Traditionally <u>less accepted</u> in <u>RESTERAINT</u> cultures:

Social change in Poland: PFE is <u>desirable</u> parental behavior Positive effect >
No effect
(attachment
security)

Normative in INDULGENT cultures:

N===erlands

T ← ey

Pand

No effect > Positive effect

Expression of NEGATIVE feelings

Traditionally <u>accepted</u> in RESTRAINT cultures:

P\_\_\_nd

No effect > Negative effect

<u>Less accepted</u> in <u>INDULGENT</u> cultures:

**:**herlands

key

Negative effect >
No effect >
(attachment
insecurity)

## Method

## Method: Our project

## Combination of *emic* and *etic* approach to attachment and parenting in Poland, Turkey and Netherlands (CEE-PaAtt)

Lubiewska, K. Głogowska K., Sumer, N., Aran, O., van de Vijver, A. J. R., de Raad, W.

#### QUALITATIVE stage:

Focus group meetings Interviews with 30 mothers in each country about

. . .

Emic scales developed based on culture-specific analysis of interviews

#### QUANTITATIVE stage:

Pilot study
The main data collection

## Method: Sample & Instruments

#### Sample:

Mothers of children between 8-12 year of age in Poland (n = 258), Turkey (n = 250), and Netherlands (n = 250)

#### **Instruments:**

- ☐ Experience in Close Relationships-Rvised for Children: 19 items reminded after EFA and CFA analyses
  - Avoidance (alphas from .802 to .950)
  - Anxiety (alphas from .702 to .927)

Metric invariance established across cultural groups

- Network of Relationships Inventory: Behavioral Systems Version: 6 items
  - Seekieng for Safe haven: (alphas from .799 to .873)
  - Seeking for Secure base: (alphas from .757 to .774)

#### Maternal report:

- ☐ Emic scales: Maternal expression of feelings in relations with own child
  - Positive feelings: (alphas from .838 to .900)
  - Negative feelings: Verbalization (alphas from .625 to .755); Emotional (alphas from .731 to .771);
     Distance (alphas from .768 to .836)

5 steps Likert scale

Metric invariance of all scales was established across cultural groups

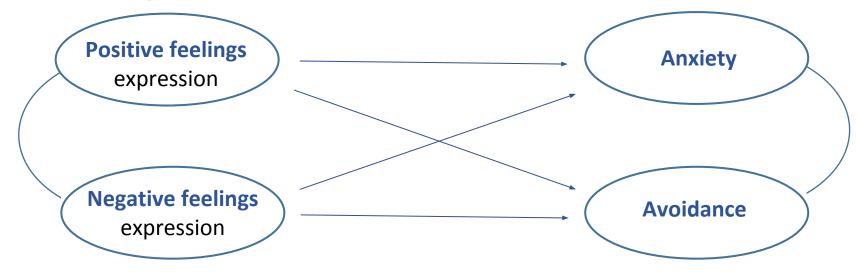

## Results

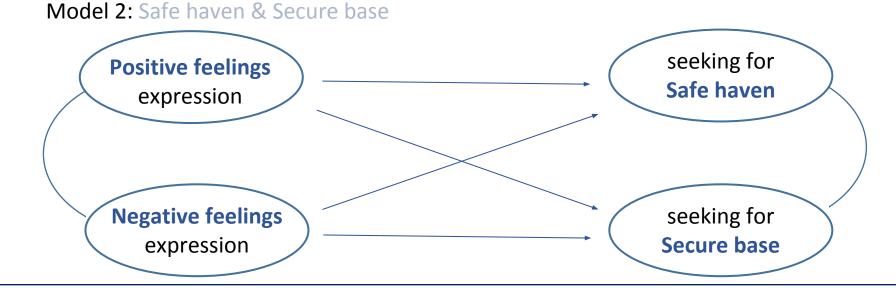

- SEM structural model under the study
- □ SEM results and MG-SEM based moderation effects for models explaining child attachment dimensions of:
  - Avoidance and Anxiety (Model 1)
  - Safe haven and Secure base (Model 2)

## Structural SEM models under the study:

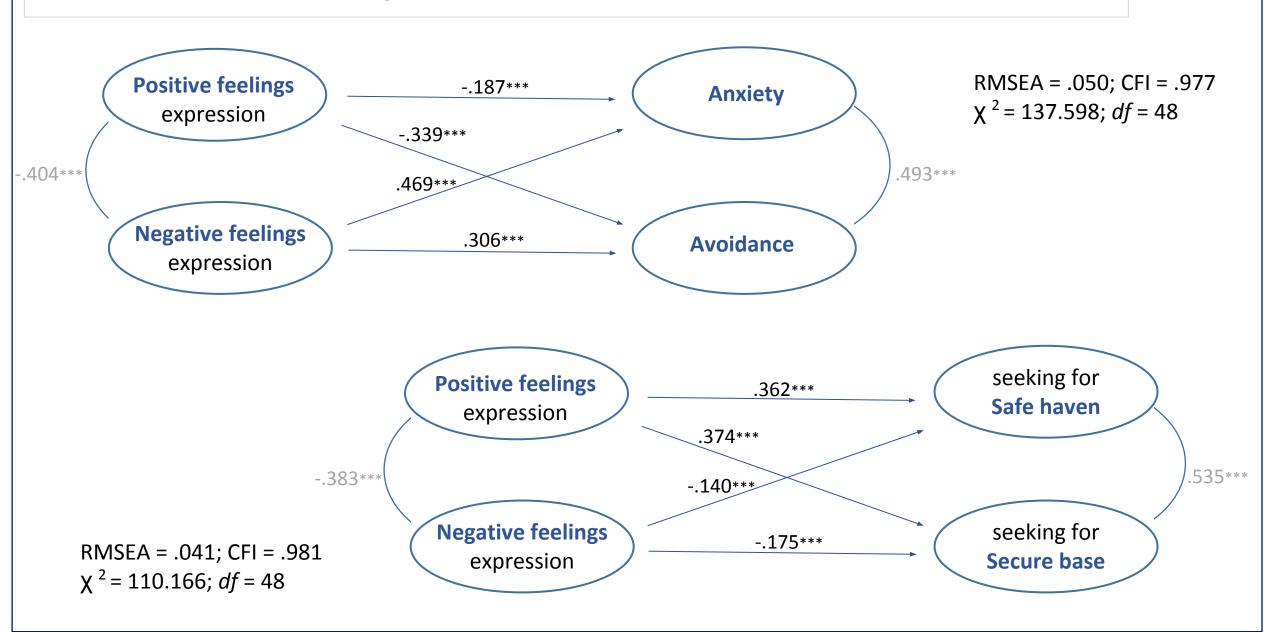

Model 1: Anxiety & Avoidance

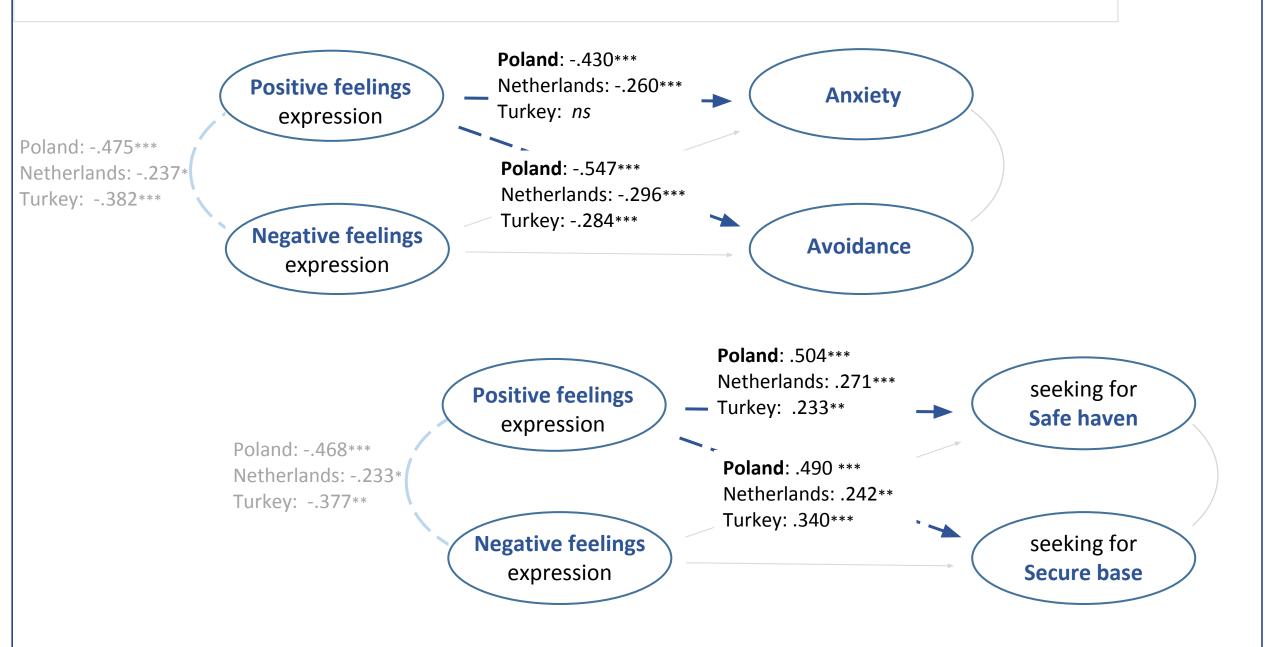

Structural paths were tested in Multigroup SEM testing moderation effects of culture

## **Results**: Total sample

## **Results**: Moderation effects

## Discussion

## **Discussion & Future directions**

- Positive feelings expression hypothesis was supported:
  - Culturally desirable parental behavior may be strongly related with developmental outcomes like attachment security
  - Fasionable matters!
  - Negative hurts universally?
- Culture moderates effects of: Positive > negative parental behaviors
- Effects of negative expression of feelings is not culture sensitive in our study

#### **Future directions:**

Lacking traditional restraint and not indulgent culture

## Thank you for attention!

## **Attachment developmental prerequisites**

#### 

factors

#### **Sensitive parenting**

(e.g., Ainswirth et al., 1978/2015)

- Sensitivity (vs Insensitivity)
- Availability (vs Ignorance and Neglect)
- Acceptance (vs Rejection)
- Cooperation (vs Interference)

Expression of positive > negative feelings

## Child attachment security

- Mothers, less fathers and other attachment figures
- Other factors (e.g., genetical -> differentia susceptibility)

#### Culture

- Provides opportunities for development
- ☐ Defines the limits of what is desirable, "normal", allowed
- ☐ Defines meaning of parenting behaviors (e.g., corporal punishment as involvement or child abuse)

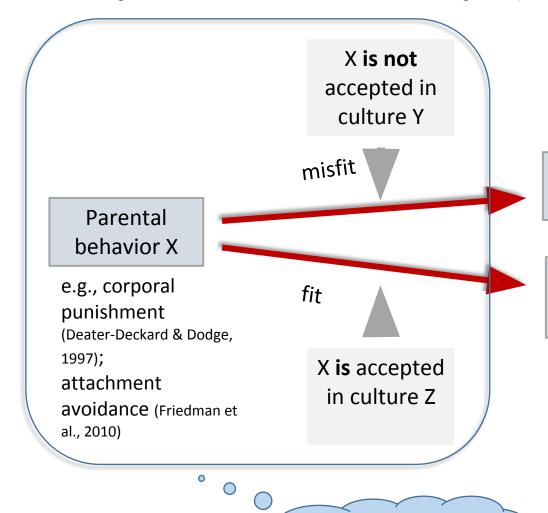

(e.g., Deater-Deckard & Dodge; Keller, 2015; Scarr, 1993)

## **Culture-fit hypothesis**

(Deater-Deckard & Dodge, 1997; Friedman et al., 2010; Ward & Chang, 1997)

Individual perception of

Meaning of X

Negative developmental outcomes in children

e.g., corporal punishment in European-American sample

- No effect?
- Positive outcomes?

e.g., corporal punishment in African-American sample

#### The research gap:

Developmentaly negative but not positive parental behaviors were tested

## Polish, Turkish, and Dutch cultural context .

#### Dimensions of cultures:

Hofstede (2009): Individualism/Collectivism,
Restraint/Indulgence

Gelfand (2011): **Tightness/Looseness** of culture

Polish cultural context: Social change from Restraint to Indulgence in child rearing, tight, individualistic

**Turkish** cultural context: Indulgent, tight, collectivistic

**Dutch** cultural context: Indulgent, loose, individualistic

#### Middle childhood:

- Understudied
- Relative increase of influence of culture and acquisition of culture's standards (Grusec, 2002)
- Peers become more important but parents are still important socialization agents and attachment figures (Arnett, 2014; Laursen & Collins, 2009)

## Negative effect or No effect (Attachment insecurity of a child)

Positive effect > No effect (Attachment security of a child)

Traditionally <u>less accepted</u> in **RESTERAINT** cultures:

**and** 

Social change in Poland: PFE is desirable parental behavior

Maternal expression of positive feelings (PFE)

herlands

key

No effect > Positive effect

Maternal expression of negative feelings (NFE)
